PROFILE

Flutter Developer with 1.5 years of experience building scalable, high-performance cross-platform apps. Skilled in Flutter, Dart, Firebase, REST APIs, and clean architecture patterns including MVVM and BLoC. Proven success delivering production-ready apps featuring offline-first design, real-time synchronization, notifications, and secure backups. Experienced full-stack developer with Node.js, Express.js, and MongoDB backend integration. Passionate about clean UI, efficient code, teamwork, and delivering impactful mobile solutions.

TECHNICAL SKILLS

Languages & Frameworks: Flutter, Dart, JavaScript, Node.js, Express.js

Databases: Firebase, MongoDB, MySQL

Core CS Concepts: Clean Architecture (MVVM, BLoC), REST APIs, Agile Methodology

Tools & Platforms: Git, Linux, AWS, Docker

SOFT SKILLS

Teamwork - Communication - Problem Solving - Adaptability - Continuous Learning

PROFESSIONAL EXPERIENCE

Flutter App Developer | Self-employed / Freelance

Dates not specified

PERSONAL PROJECTS

BrainBee – Flutter / Node.js / Express.js / MongoDB

- Developed AI-powered personalized learning app with adaptive study plans, AI flashcards, quizzes, summaries, and RAG chatbot integration.
- Added gamification features: peer battles, leaderboards, badges, and motivation system.
- Designed scalable cross-platform architecture.

Ecommerce App – Flutter / Firebase / Stripe / GetX

- Built scalable Flutter e-commerce platforms with separate customer and admin apps.
- Implemented full shopping flow: authentication, product catalog, wishlist, cart, coupons, checkout, orders, notifications, and profile management with Hive and GetStorage caching.
- Integrated secure Stripe payments with Firebase Cloud Functions, including PaymentSheet, stored cards, wallet funding, and webhook transaction handling.
- Developed role-based admin dashboard for analytics, order/product management, approvals, notifications, risk alerts, exports, and audit logs.

Ride Sharing App – Flutter / Firebase / Google Maps API

- Built full-stack ride-sharing app with three user roles: rider, driver, admin.
- Implemented real-time ride tracking with live GPS, polyline route visualization, and turn-by-turn voice navigation using Google Directions API and Flutter TTS.
- Developed admin dashboard with Firestore live metrics, revenue analytics, ride management, and real-time user control.
- Designed smart ride-matching and communication with radius-based driver search, off-route rerouting, and in-app messaging.
